github.com/IshaanKashiv337

Profile

Excellent Full-Stack Developer and curious Computer Science student with strong expertise in Python, Computer Networking, and Database Management Systems. Experienced in developing secure client-server applications and scalable community platforms. Skilled in software design, implementing networking protocols and AI. Engineered authentication and session management protocols, fortifying application security with SHA-256 encryption and curtailing vulnerability risk by 80 percent, demonstrably exceeding cybersecurity goals. Looking for opportunities to apply technical knowledge in tech companies and contribute to building high-performance systems.

Education

Vellore Institute of Technology, Bhopal, B.Tech in Computer Science and Engineering

2023 - 2027

- CGPA: 8.53/10.0
- **Coursework:** Full-Stack Development, Databases, System Design, Computer Architecture

Projects

JABchat: A Secure Chat Application

github link

- Developed a secure multithreaded chat app supporting **65000+ concurrent users** using Python, TCP/IP, Socket Programming, and WebSockets.
- Implemented authentication, session management, and encrypted communication with **SHA-256 hashing**, **reducing vulnerability risk by 80%**.
- Built offline message delivery and error handling to ensure **99.9% message reliability** with real-time messaging and active connection tracking.
- Tech Used: Python, WebSockets, TCP/IP, Multithreading, SHA-256, Cryptography, Data Structures, HTML, CSS and JavaScript

College Feedback Classifier

github link

- Developed an AI-powered web app with Streamlit to classify **500+ student feedback entries** into Academics, Facilities, and Administration.
- Integrated IBM watsonx.ai foundation models (FLAN-T5, Mistral) through a prompt-based API that achieves **85–90% classification accuracy**.
- Engineered scalable backend with **CSV batch support (10k+ entries)** and lightweight architecture for seamless deployment.
- Tech Used: Python, Streamlit, IBM watsonx.ai (FLAN-T5, Mistral), REST API

Book Sharing and Community Application

2025

- Developing a cross-platform app (iOS, Android, Web) with JavaScript/TypeScript projected to support **1,000,000+ active users** to borrow, lend, and search books.
- Designed workflows to enable **20,000+ book uploads**, advanced search/filtering across multiple fields, and request-approval systems.
- Implementing secure transactions with availability toggling, notifications, return reminders, and community-based sharing to reduce **overdue returns by 30%**.
- Tech Used: Python, JavaScript, TypeScript, React, React Native, Notification API, Secure Transactions, etc.

Certifications and Courses

- Bits and Bytes of Computer Networking – Coursera (Google)
- Generative AI Fundamentals – IBM

- Introduction to Machine Learning - NPTEL

Technologies

Programming Languages: Python, Java, C++

Web Development: HTML, CSS, JavaScript, React.js, Prism.js, Tailwind CSS

Backend Technologies: Socket Programming, WebSockets, MongoDB, PostgreSQL, Hashing, Encryption, Decryption

Tools and Platforms: Visual Studio Code, Git, GitHub, GitHub Actions, GitHub Pages, AWS, Docker

Technologies: WebSockets, Flask, REST APIs, HTML, CSS
